Introduction to Web Development

1. What is Programming?

Programming is the process of giving instructions to a computer so it can perform tasks.
A computer follows instructions exactly as given.

2. What is the Web?

The web (World Wide Web) is a collection of websites accessed using a browser like Chrome.
The internet is the infrastructure, while the web is what we use on top of it.

3. Website vs Web App

Website: Mainly for viewing information (e.g. blogs, news).
Web App: Allows interaction (e.g. login, messaging, shopping).

4. What is a Web Developer?

A web developer is someone who builds websites and web applications.
They use technologies like HTML, CSS, and JavaScript.

5. Types of Web Developers

Frontend Developer: Works on what users see.
Backend Developer: Works on server, logic, and database.
Fullstack Developer: Works on both frontend and backend.

6. How the Web Works

1. You enter a URL in a browser.
2. Browser sends a request to a server.
3. Server processes the request.

4. Server sends back files (HTML, CSS, JavaScript).
5. Browser displays the website.

7. Key Tools (Overview)

VS Code: Code editor.
Browser: Used to view websites.
DevTools: Inspect and debug code.
Git: Tracks changes in code.
